Project Name	CUSTOMER CARE REGISTRY

## FLASK SETUP:

The image shows the PyCharm IDE interface. The main editor displays the `main.py` file with the following code:

```
1 # Importing flask module in the project is mandatory
2 from flask import Flask
3 app = Flask(__name__)
4 # The route() function of the Flask class is a decorator,
5 @app.route('/')
6 # '/' URL is bound with hello_world() function.
7 def hello_world():
8     return 'Hello World'
9 # main driver function
10 if __name__ == '__main__':
11     # run() method of Flask class runs the application
12     # on the local development server.
13     app.run()
```

The Run console at the bottom shows the following output:

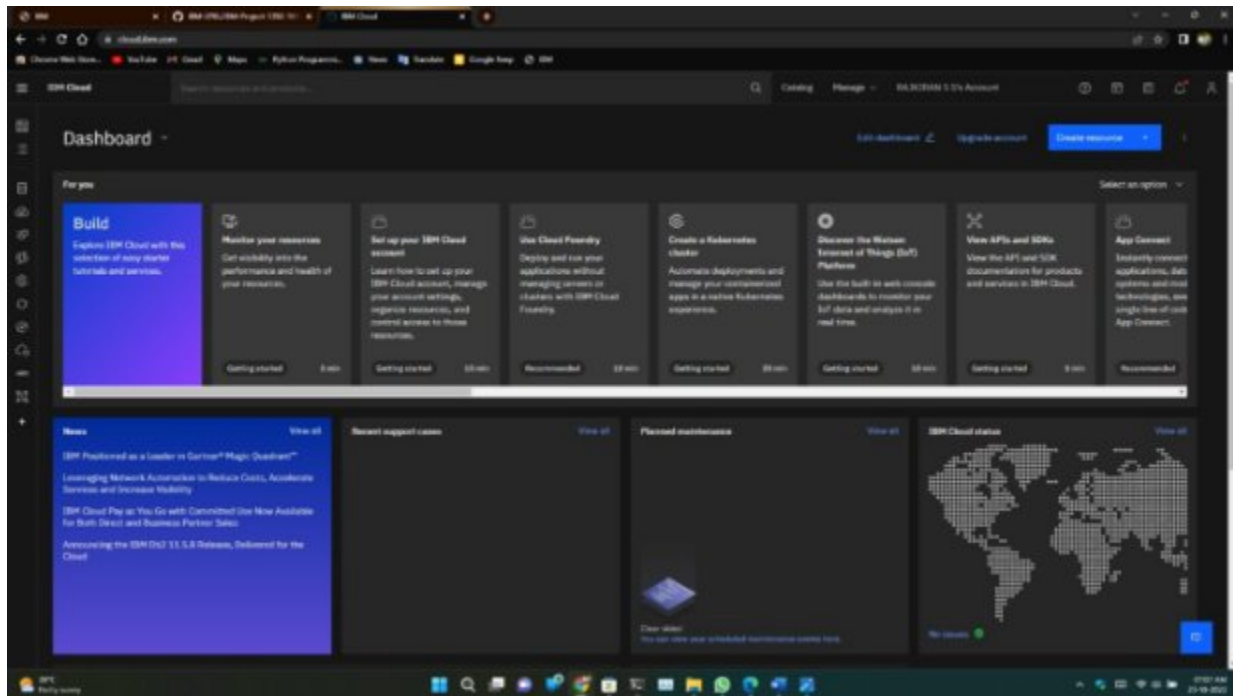

```
C:\Users\arisha\PycharmProjects\HelloWorld\venv\Scripts\python.exe C:/Users/arisha/PycharmProjects/HelloWorld/main.py
+ Serving Flask app 'main'
+ Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
